Access: One

Enhancing Your Identity And Access Management Infrastructure Through Simplified Management And Centralised Control.

In a world of ever increasing risk your organization requires a flexible, robust and secure approach to Access Management. As new threats are introduced you need to look to strong authentication - supporting numerous applications and authentication protocols across different systems and scenarios.

Access: One simplifies the complexity of managing identity, access and audit management for multiple systems, infrastructures and security services - reducing risk and removing the need for complex application development.

Access: One's zero-touch user management system simplifies your Access and Authentication Management solution by enabling you to:

- Seamlessly integrate and reuse existing user repositories - removing the need for provisioning and synchronization to an Access Manager.
- Associate multiple authentication mechanisms and user repositories with a single application.
- Provide real-time authentication of users against multiple authentication sources (for example, multiple Active Directory Forests or Windows Domains).
- Provide a real-time validation of users, authentication mechanisms and access privileges against your infrastructure - new services can be enabled dynamically.

Implementing Access: One allows you to:

- Support your Single Sign-On and Federation requirements, including SPNEGO and SAML support out of the box.
- Introduce new services and features to web services logon (for example, anti-phishing controls or choice of authentication methods available).
- Integrate additional information sources in real-time. Extending the scope of your authentication process and enabling you to collect, consolidate and transform attributes from external systems and securely pass them to the target application.
- Introduce new services for step-up authentication or transaction signing.
- Manage multiple Applications and Authentication Mechanisms from a central console.
- Easily secure access to applications both internal and external to your organization. Simplifying control of customer and employee access while extending your access management platform to support the cloud.

...without the need to change your backend applications.

Access: One, providing Access Management for secure access to Web applications from a single administrative console.

Access: One enables organizations to centrally manage and control the authentication and authorization mechanisms for multiple applications and user repositories from a central console.

Bringing together security services from across your infrastructure enables you to build a best-of-breed platform for identity and access management; reusing critical security services without the need for additional deployment and license costs.

Built to provide real-time authentication and authorization services, Access: One ensures the right people have the right access at the right time.

Access: One also enables your organization to benefit from the added convenience of single sign-on (SSO) to your protected applications. For organizations, single sign-on can help to:

- Improve employee productivity - with users only authenticating once.
- Strengthen controls - by complimenting your single sign-on with secure, multi-factor authentication.
- Reduce administrative costs - by reducing the burden of password resets on the help desk.
- Increase Security - as users no longer needing to know their passwords for backend applications, stronger password policies can be implemented without the risk of users adopting on unsafe password practices.
- Decrease employee downtime - by reducing the risk of forgotten passwords.

The Pirean Approach - Identity, Access and Compliance Management

Organizations looking to extend the reach of their Identity and Access Management solutions can look to complement Access: One through introducing Compliance: One for Continuous Controls Monitoring.

Through Compliance: One's risk framework and attestation engine you can easily introduce the capability to monitor and manage the access rights of every user across every system.

To find out more about Compliance:One, contact your Pirean representative or visit www.pirean.com/complianceone.

Access: One for IBM Tivoli Access Manager for e-Business

Access: One reduces the deployment time for TAM implementations by allowing you to easily create, manage and extend External Authentication Interfaces through a single interface.

With our zero-touch user management system you remove the need for provisioning and synchronization with your back end user repositories.

Using Access: One you can easily introduce new business logic to your login process (for example IP white lists and time based access control) and new access controls (such as SMS based validation) without the need for development or changes for your backend applications.

To find out more about Access: One, contact your Pirean representative or visit www.pirean.com/accessone.

Access: One also enables you to quickly extend your TAM infrastructure with out-of-the-box accelerators for:

- ActivIdentity;
- Cryptomathic;
- Entrust;
- Gemalto;
- RSA;
- Vasco; and
- Verisign.

About Pirean

Pirean is a leading technology partner and consultancy delivering real-time business and service assurance through solutions for infrastructure and application management.

Working in partnership with Pirean, your business will quickly realise the full potential of your infrastructure. We focus on helping our clients to achieve their business goals and providing them with ongoing support through proven capabilities in:

- Consulting
- Technology
- Outsourcing

We deliver the visibility, control and automation capability that you need from your infrastructure and applications to deliver robust, highly available and streamlined business services while managing risk and compliance.

Our unique blend of consulting services and technical capabilities enable us to help you take a strategic view of your business; where you are, where you want to go and how to better leverage the resources you have to get there.

We deliver expert support for Infrastructure, Service and Security Management platforms using IBM technologies throughout the life of your solution from design and build through delivery and into ongoing performance improvement and support.

Pirean's accolades include the IBM 'Business Partner Innovation Award' (2008) 'Beacon Award Finalist – Outstanding Service Management Tivoli Solution' (2009) and the IBM Tivoli Business Partner Service Management Solution Award (2010).

In March 2010, Pirean was officially recognised by IBM Tivoli Software as the most accredited Tivoli business partner in the world, based on the Tivoli AAA Deployment Accreditation initiative. The company holds 14 of IBM's AAA, AA and A Tivoli Accreditations spanning Security and IT Service delivery. Pirean is the first and only Partner to hold IBM Tivoli AAA status, the highest authorised level, across both IT Service and Security Management.
