

PRESS RELEASE

Pirean to Launch Access:One at Infosecurity Europe 2010

First public demonstration of secure access management platform for web applications within intranet, hosted and cloud environments; Pirean to showcase Compliance:One as part of end-to-end Continuous Controls Monitoring solution

London, England – 19th April, 2010 – Pirean, a leading delivery partner for IT Service and Security Management, today announced the launch at Infosecurity Europe 2010 of Access:One, a secure access management platform for Web applications.

Pirean (Stand K44), debuting at the event in Earl's Court in April, will also be offering public demonstrations of Compliance:One, an advanced Identity, Access and Audit Management solution which was designed in partnership with a major UK financial institution to offer Continuous Controls Monitoring.

Access:One has been built from the ground up to allow organisations to create a unified and policy driven access control framework for web applications that reside within the firewall, are externally hosted or are out in the cloud. With support for major user authentication platforms, web application servers and two-factor authentication devices, Access:One is currently being deployed by a major UK financial institution to aid in system consolidation following one of the largest mergers in the sector's history.

Pirean will be running a number of stand demonstrations on the power and flexibility of both applications which are designed to offer rapid implementation through an extensive range of "out-of-the-box" connectors which include SAP, RACF, DB2, Oracle and Microsoft Active Directory.

"Access:One is a response to demand from our clients for a platform to simplify application security and accessibility," Stuart Wilson, MD of Pirean explains, "Activities like mergers, acquisitions and divestitures throw up huge challenges around user authentication and security – for both internal users and an organisation's client base."

“Access:One and Compliance:One provide a cohesive end-to-end workflow across the entire process of user access and audit management. By bringing together both solutions we quickly address real-time access and identity management as well as providing strong audit and governance.”

Access:One provides a centralised facility for the creation and enforcement of security policies without requiring code or configuration changes to back-end applications. “Some of the main advantages of using Access: One are that your target applications don’t need to be modified and the migration is completely transparent to the end user. Validation occurs in real-time so new applications can be enabled dynamically without having to take key business services offline.” Wilson adds.

Pirean, who have been officially recognised by IBM as the most accredited Tivoli business partner in the world as of 31st of March 2010, are also the only European IBM Tivoli AAA rated IT Service and Security Management partner.

Wilson further commented “We believe that ours is the only product in the market that has this level of support and functionality available as a turnkey solution for access management. Working alongside some of the world’s leading companies we’ve designed a product which is quick to deploy and easy to manage – all while addressing the complex requirements that are typical of large enterprises – we deliver identity and access management for cloud based environments as well as legacy, client server and web based applications.”

About Pirean

Pirean is a leading technology partner and consultancy delivering real-time business and service assurance through solutions for infrastructure and application management. We are recognised leaders in the management of business change, pairing consultancy with an industry leading portfolio of technical services across the design, development and delivery of IT Service and Security Management solutions.

Working in partnership with Pirean, your business will quickly realise the full potential of your infrastructure. We focus on helping our clients to achieve their business goals and providing them ongoing support through proven capabilities in:

- Business Consulting;
- Technology Consulting; and
- Outsourcing.

We deliver the visibility, control and automation capability that you need from your infrastructure and applications to deliver robust, highly available and streamlined business services while managing risk and compliance.

Our unique blend of services and capabilities enable us to help you take a strategic view of your business; where you are, where you want to go and how to better leverage the resources you have to get there.

Pirean are one of Europe's Leading IBM Premier Business Partners. Having been awarded IBM Tivoli's AAA Accreditations across both the IT Service and Security Management portfolios we are, as of March 2010, recognised by IBM as the most qualified IBM Tivoli Business Partner in the world.

Recent accolades include the 2010 IBM Tivoli Software 'Business Partner Service Management Solution Award' as well as the 'Business Partner Innovation Award' and 'Beacon Award Finalist – Outstanding Service Management Tivoli Solution' in 2008 and 2009 respectively.

We deliver expert support for Infrastructure, Service and Security Management platforms using IBM technologies throughout the life of your solution from design and build through delivery and into ongoing performance improvement and support.
